The Urban Water Cycle

<https://www.nationalgeographic.org/urban-water-cycle/>

The Urban Water Cycle The Urban Water Cycle Watch this brief, video picture of practice that captures everyday classroom life and provides real-life examples of how students learn and think about freshwater topics.

How the Urban Water Cycle Works - SEH®

<http://www.sehinc.com/news/how-urban-water-cycle-works/>

The urban water cycle is different than the hydrologic cycle, which accounts for environmental condensation, precipitation and evaporation. The urban water cycle is the engineered methods that bring clean water to each of us. These methods and the people that operate them are the unsung heroes in a complex story playing out right beneath our feet.

PFAS in the Urban Water Cycle - AWE Magazine

<https://www.aweimagazine.com/article/pfas-in-the-urban-water-cycle/>

PFAS in the Urban Water Cycle Persistent chemicals and PFAS is a large group of very persistent chemicals that tend to accumulate in the environment and in human and animal bodies. They therefore pose a risk to human health.

Natural and urban water cycle | Melbourne Water

<https://www.melbournewater.com.au/water-data-a-cycle/>

Urban water cycle. People have changed the natural water cycle; building pipes take water for drinking and remove sewage and stormwater. This is the urban water cycle, and in Melbourne is managed by Melbourne Water. Play the Drip Trip game to learn more about the interactive water cycle. Water: from catchments to tap

The Urban Water Cycle: Sustaining Our Modern Cities ...

<https://blog.nationalgeographic.org/2014/03/19/the-urban-water-cycle-sustaining-our-modern-cities/>

A given urban system may combine all of these methods in varying degrees. Each component in the urban water cycle brings its own benefits and challenges, and understanding them is the first step to developing sustainable water solutions for our growing population.

Your Task

Urban landscapes are host to a suite of contaminants that impact on water quality, where novel contaminants continue to pose new challenges to monitoring and treatment regimes. In this task, you are required to search the web for information on the urban water cycle and summarize how management of water in the urban environment helps us in our daily lives. What are the implications of better management of the urban water cycle on our health and environment? You are also required to analyze the challenges that remain in this modern process of the urban water cycle. (Minimum 100 words)

Remember: After searching for at least 20 minutes you can move on to the final test by clicking on the "To Final Test" button. The documents you saved will be available to you when writing (in your own words) a short summary about the topic.
